

FONIX

VoiceCentral

3.1

Freedom of Speech™ with Fonix VoiceCentral™ 3.1 for Mobile and Wireless Devices — Now **Bluetooth** enabled

Fonix VoiceCentral™ 3.1 is an interactive software application for Windows Mobile 5 Pocket PC devices that provides users with “hands-free, eyes-free” device management — users dial contacts, listen and respond to email, launch and close applications, and access information simply by speaking.

The key to increasing the usability of mobile devices is to enable users to access pertinent information quickly and easily. As device capabilities increase, speech recognition is a ‘must have’ interface to avoid tedious menus and button pushing.

Fonix VoiceCentral 3.1 enables mobile device users to do it all simply by speaking. Fonix’s voice-enabled interface is convenient and safe (no need to push multiple buttons or scroll through menus), and it’s accurate even in noisy environments. VoiceCentral provides the perfect solution for mobile device users who are looking for ways to make their busy lives simpler.

Fonix VoiceCentral 3.1 is:

- Speaker independent — there’s no voice training involved, so VoiceCentral is ready to use as soon as the software is loaded.
- Highly accurate — even in noisy environments like cars or airports, perfect for people on the go who want a better, safer and easier way to dial contacts and access email and other information.

Fonix VoiceCentral 3.1 allow users to:

- Access all VoiceCentral functions on the device without pushing buttons via a Bluetooth headset.
- Navigate menus and launch or close any application simply by speaking.
- Access emails and reply via a recorded voice note.
- Create custom commands such as “Play Music” or “Browse website.”
- Dial a number and use voice to save it to the Outlook contact list.
- Maximize access to important information on the device screen by minimizing the VoiceCentral toolbar.
- Call contacts stored on the Sim card as well as the PDA.
- Access the “Contacts” and “Launch Apps” pages with easy-to-use menus.
- Access calendar and tasks — Listen to today’s calendar and hear the most important tasks for the day.
- Dial names directly from the contact list — no matter how many names are listed. VoiceCentral has been tested with over 2,000 contacts. And you don’t have to navigate multiple menu trees; just say the name of the person you want to call.
- Dial a number directly using a continuous string of numbers; no pausing or waiting for each digit.
- Customize the pronunciation to improve accuracy or to add a nickname for a contact.

Fonix VoiceCentral 3.1 Provides Hands-free, Easy Access to Your Mobile Device

What people are saying about Fonix VoiceCentral:

“VoiceCentral 3.1 directly aligns with one of our core goals – increasing productivity and enjoyment of the mobile lifestyle. We are pleased to have this offering on our PocketGear.com and Smartphone.net sites, enabling end users to make more of their mobile experience.”
— Alex Bloom, VP of Content and Consumer Devices, Motricity.

Ana Martinez, a fundraising and customer service professional, is visually impaired and relies on assistive technologies in her business and personal life. “I’ve been tremendously impressed with VoiceCentral and what it can do for those of us with visual disabilities. Fonix has the right idea and this solution ‘speaks’ to me and my needs.”

“To be able to get through my email while driving is a big benefit to me. VoiceCentral makes my travel time more productive.”
— Guy Sucharczuk, CEO, Aurora Networks
